## LAWN AND PLANT SURVIVAL AID

### Cuts Watering 50% or More!

**AQUAMAGIC** is a unique blend of hygroscopic & humectant components that attract and hold moisture like tiny "water magnets" within the soil of plant roots.

**AQUAMAGIC** manages available moisture in the root zone extending watering intervals of indoor and outdoor plants, flowers, vegetable, shrubs, trees and grass by as much as 2 to 3 times. Each application reduces water needs for up to 3 months before reapplication needed.

You need **AQUAMAGIC** because it:

- Reduces Overall Watering Requirements
- Enhances Nutrient & Pesticide Efficiency
- Eliminates or Minimizes Drought Stress
- Controls or Eliminates Localized Dry Spots
- Increases Growth with up to 50% Less Watering

**AQUAMAGIC** is Environmentally Friendly, Biodegradable and Safe for pets and humans. It contains no phosphates, petrochemical derivatives or other toxic fractions which may cause ground water or runoff contamination

Each application reduces watering needs for up to 3 months. For additional moisture management, spot treatment of isolated dry patches or additional protection during prolonged hot, dry conditions, Aquamagic may be applied at rates up to 5 times the following application rates, either as a single application or in multiple applications (*always rinse Aquamagic off foliage and flowers and into the soil where Aquamagic is designed to function*)

**Lawns:** Soil should be wet to moist (but not saturated) before applying Aquamagic, water thoroughly the night before or a few hours before applying. Through hose-end sprayer, 1 quart treats 2,500 to 5,000 square feet (depending on desired watering reduction). Immediately after applying, water thoroughly, rinsing Aquamagic down into the root zone, where it is designed to function. (Approximately 1 inch of water is needed)

**Trees, Shrubs and Individual Plants:** Through hose-end sprayer, apply enough Aquamagic to thoroughly saturate the soil throughout the root zone.

**Large Planters, Flowers and Vegetable Gardens:** Through hose-end sprayer, apply Aquamagic around plant root zone at a rate of 1 quart of concentrate per 1,000 square feet.

**Potted or Containerized Plants:** Through hose-end sprayer, apply enough Aquamagic to thoroughly saturate the soil throughout the pot or container. (*For indoor plants, fill jug or watering can from hose-end sprayer or mix 2 ounces of concentrate with each gallon of water.*)

**Re-watering Treated Plants and Grass:** Aquamagic extends watering requirements by managing excess moisture. Therefore, for maximum effect, it is important to water thoroughly when re-watering Aquamagic-treated areas, providing excess subsurface moisture for Aquamagic to manage.

**Aquatain is biodegradable.** Re-application every three months allows Aquamagic to build up in the soil profile, providing even greater drought resistance with each application. Aquamagic is only beneficial within the root zone and therefore must be watered in thoroughly after application.

This product contains Hydretain a patented moisture management technology
